### **Subject: Science**

### Reception

# Beam County Primary School: Long-term Component Map Subject: Science Year 1

Domain/Unit	Human body and senses	Naming and describing materials	Properties and uses of materials	Animals (vertebrates)	Identifying plants and their parts
Composite Goal	identify, name, draw and label the basic parts of the human body and say which part of the body is associated with each sense.  Seasonal changes observe changes across the four seasons observe and describe weather associated with the seasons and how day length varies	Distinguish between an object and the material from which it is made.  Identify and name a variety of everyday materials, including wood, plastic, glass, metal, water and rock  Seasonal changes observe changes across the four seasons observe and describe weather associated with the seasons and how day length varies	Describe the simple physical properties of a variety of everyday materials.  Compare and group together a variety of everyday materials on the basis of their simple physical properties	identify and name a variety of common animals including fish, amphibians, reptiles, birds and mammals  identify and name a variety of common animals that are carnivores, herbivores and omnivores  describe and compare the structure of a variety of common animals (fish, amphibians, reptiles, birds and mammals, including pets)  identify and name a variety of common animals that are carnivores, herbivores and omnivores  Seasonal changes  Observe changes across the four seasons observe and describe weather associated with the seasons and how day length varies	identify and name a variety of common wild and garden plants, including deciduous and evergreen trees  identify and describe the basic structure of a variety of common flowering plants, including trees  Seasonal changes Observe changes across the four seasons observe and describe weather associated with the seasons and how day length varies
Components	Human Body and senses  1. Identify body parts and reason which parts (and their senses) are more suited to observe temperature and texture.  2. *Compare and determine if all body parts are the same.  3. Explore sense of hearing and classify sounds based on volume.  4. Explore sense of smell.  5. Explore the sense of taste and classify items as sour or sweet.  Seasonal changes  6. *Classify leaves based on observable characteristics. (taught after lesson 2- Human Body and senses)	<ol> <li>Identify and classify trees as deciduous or evergreen.</li> <li>Identify animals that share our space based on evidence of animal activity.</li> <li>Naming and describing materials</li> <li>Identify and classify materials into wood, plastic and metal based on observations made on properties, and determine whether materials are natural or manufactured.</li> <li>Identify and classify materials into glass, water and rock based on observations made on properties, and determine whether materials are natural or manufactured.</li> <li>Determine suitability of paper for different purposes based on their properties via comparative testing, and sort paper into those that can't.</li> <li>Observe the characteristics of different fabrics and determine type of clothing each fabric is suited for.</li> <li>Identify and classify objects according to their sourced materials, and whether they are natural or manufactured.</li> </ol>	Properties and uses of materials  1. Recognise that the same objects can be made from different materials (identifying and classification)  2. Describe properties with specific vocabulary and provide examples of properties shared by different materials by observation and classification.  3. Investigate the stretchiness of materials via comparative testing.  4. Investigate the absorbency of different materials using comparative testing.	<ol> <li>Identify and classify vertebrates into five classes: amphibians, birds, fish, mammals and reptiles.</li> <li>Identify and describe observable characteristics of different reptiles.</li> <li>Identify and describe observable characteristics of birds.</li> <li>Identify and describe observable characteristics of amphibians, and explain the characteristic that makes amphibians distinct.</li> <li>Identify and describe observable characteristics of fish.</li> <li>Identify and describe observable characteristics of mammals.</li> <li>Classify different vertebrates into carnivores, herbivores and omnivores.</li> <li>Seasonal changes</li> <li>Observe and record evidence of new animals in outside space in spring.</li> <li>Identify and name common birds using an ID sheet.</li> <li>Observe, record and compare types of birds seen in spring.</li> </ol>	Seasonal changes  1. Observe and compare changes over the year (flowers, leaves of trees)  Identifying plants and their parts  2. Name and classify plants into wild and garden plants.  3. Observe and compare characteristics of different flowering plants and their parts.  4. Observe and compare tap and branching roots.  5. Identify name of trees using an ID sheet and explain why tree is a plant based on its observable characteristics.  6. Compare and describe similarities and differences between flowering plants.  7. Design and create own plants.

## Beam County Primary School: Long-term Component Map Subject: Science Year 2

SEAM COUNTY PRIMARY SCHOOL

Domain/Unit	Local habitats	Choosing materials	Changing materials	Growing Seeds and Bulbs	Growing up (including humans)	Growing Healthy Plants
Composite Goal	Explore and compare the differences between things that are living, dead, and things that have never been alive  Identify that most living things live in habitats to which they are suited and describe how different habitats provide for the basic needs of different kinds of animals and plants, and how they depend on each other  Identify and name a variety of plants and animals in their habitats, including micro-habitats  Describe how animals obtain their food from plants and other animals, using the idea of a simple food chain, and identify and name different sources of food	Identify and compare the suitability of a variety of everyday materials, including wood, metal, plastic, glass, brick, rock, paper and cardboard for particular uses	To find out how the shapes of solid objects made from some materials can be changed by squashing, bending, twisting and stretching.	To know the requirements of the life and growth of a plant	notice that animals, including humans, have offspring which grow into adults  find out about and describe the basic needs of animals, including humans, for survival (water, food and air)  describe the importance for humans of exercise, eating the right amounts of different types of food, and hygiene	To find out and describe how plants need water, light and a suitable temperature to grow and stay healthy
Components	<ol> <li>Classify items found into alive, never been alive or was once alive, and explain reasons behind their groupings</li> <li>Observe a tree habitat and identify animals and plants found there.</li> <li>Observe a woody habitat and identify animals living in this habitat.</li> <li>Observe a grassy habitat and identify animals living in this habitat.</li> <li>Identify and classify plant and animals as producers and consumer; create a simple food chain based on classification made.</li> </ol>	1. Identify properties of materials and reason on why they are suitable/ unsuitable for an object.  2. Identify the bounciest ball via comparative testing.  3. Investigate durability of fabric via comparative testing and determine best fabric for a toddler's dungarees.  4. Perform simple research using secondary sources to identify inventors who develop new materials.  5. Workshop: Inventing with Isobel (Scienceoxford) — suggest and reason suitable materials for inventions based on their properties.)	1. Explore different ways to manipulate objects classify objects based on the number of ways shape of objects can be changed.  2. Classify objects into how they are manipulated, and Identify properties that enable objects to be changed based on manipulation method.  3. Identify properties required to serve the purpose of a product and suggest suitable materials.  4. Observe and record the effects of push and pull on materials.	1. Set up an observation over time to demonstrate how seeds germinate and develop into mature plants.  2. Classify seeds and bulbs and compare characteristics between the two.  3. Determine which conditions are required for germination through comparative test.  4. Determine if the size of seeds result in taller mature plants (pattern-seeking).  5. Observe, record, and compare changes seen on seeds after germination.  6. Determine conditions needed to enable germination (based on the comparative test set up in Lesson 3).	1. Sequence and describe changes observed in the life cycles of animals (including invertebrates). *  2. Distinguish between needs and wants, and identify basic needs for animals to survive.  3. Identify the main food groups and categorise food items into main food groups.  4. Demonstrate hygiene practices to stay clean and healthy.  5. Suggest reasons on why physical activities are important ways to remain active.  6. Create a plan a healthy day.	1. Distinguish between healthy and unhealthy plants and reason based on observable characteristics.  2. Set up a comparative test to determine if mature plants require light.  3. Determine if plants height is affected by temperature (pattern seeking/ observation over time)  4. Set up a comparative test enquiry to determine if mature plants require water.  5. Compare records of observations made of variables from Lesson 2 and 3, and draw conclusions from data.

# Beam County Primary School: Long-term Component Map Subject: Science Year 3

Damester (1) 11	Calaba and also	Danka salla 16 "	Faura falation 1	84	Flavorina Blant. 181	Florening Plants Life Cont.	
Domain/Unit	Light and shadows	Rocks, soils and fossils	Forces, friction and magnets	Movement and nutrition for	Flowering Plants and Plant	Flowering Plants Life Cycle	
				the human body	Growth		
Composite Goal	recognise that they need light in order to see things and that dark is the absence of light notice that light is reflected from surfaces  recognise that light from the sun can be dangerous and that there are ways to protect their eyes  recognise that shadows are formed when the light from a light source is blocked by an opaque object find patterns in the way that the size of shadows change	compare and group together different kinds of rocks on the basis of their appearance and simple physical properties  recognise that soils are made from rocks and organic material describe in simple terms how fossils are formed when things that have lived are trapped within rock	compare how things move on different surfaces notice that some forces need contact between two objects, but magnetic forces can act at a distance observe how magnets attract or repel each other and attract some materials and not others  compare and group together a variety of everyday materials on the basis of whether they are attracted to a magnet, and identify some magnetic materials  describe magnets as having two poles. Predict whether two magnets will attract or repel each other, depending on which poles are facing	Identify that animals, including humans, need the right types and amount of nutrition, and that they cannot make their own food; they get nutrition from what they eat identify that humans and some other animals have skeletons and muscles for support, protection and movement	identify and describe the functions of different parts of flowering plants: roots, stem/trunk, leaves and flowers  explore the requirements of plants for life and growth (air, light, water, nutrients from soil, and room to grow) and how they vary from plant to plant  investigate the way in which water is transported within plants	To explore the part that flowers play in the life cycle of flowering plants, including pollination, seed formation and seed dispersal	
Components	1. Recognise we need light to see through evidence gathered from observations made through identification and classification.  2. Identify objects which are most reflective through comparative testing.  3. Illustrate and explain how shadows are formed and conduct a comparative test to explain how characteristics of materials influence intensities of shadows.  4. Observe and describe similarities and differences between shadows and themselves.  5. Determine how position of light source in relation to objects changes size of shadows through comparative testing.	1. Make detailed observations to compare and identify a variety of rocks based on their physical properties of rocks.  2. Investigate properties that make rocks suitable for a particular purpose through comparative testing.  3. Make detailed observations to compare and identify different types of soils.  4. Investigate the permeability of different types of soils through comparative testing.  5. Workshop: make detailed observations to identify and compare fossils  6. Describe key points of Mary Anning's life through secondary research.	1. Observe and record effects of contact forces on an object.  2. Investigate the effects of different surfaces on the length of time a top takes to spin through comparative test.  3. Predict and investigate the effects of various surfaces on sliding efficiency of an object through comparative test.  4. Observe and illustrate attraction and repulsion between unlike and like poles.  5. Classify objects as magnetic or non-magnetic and identify materials objects are made from.  6. Determine if the size of magnets affects their strength through patternseeking.	1. Identify nutrients found in food and explain their functions in our bodies through secondary research. 2. Analyse menu on its nutritive value through identifying and classifying enquiry. 3. Name different bones found in a skeleton and describe their functions through secondary resource. 4. Investigate the regions of the body where muscles are active in facilitating mobility. 5. Determine how vertebrates and invertebrate bodies are supported through identification and classification. 6. Compare and describe how human skeletons are different to other vertebrates through secondary sources.	1. Investigate the effects of leave removal on plants growth through comparative test. 2. Observe, compare and record effects of roots removal from plants and provide reasons explaining these findings through research from secondary sources. 3. Set up an observing over time enquiry to investigate how water is transported around the plant. 4. Observe and record findings from Lesson 1 and 3. Provide reasons for findings through research from secondary sources. 5. Set up a comparative test to predict and investigate the effects of the amount of space on plants' growth. 6. Identify how plants adapt to live in their habitat through research. 7. Observe and record findings from the comparative test conducted in lesson 5.	1. Identify and label parts of a flower from observations made from a dissected flower.  2. Describe and illustrate the process of animal pollination through research and secondary resource.  3. Describe and illustrate the process of wind pollination through research and secondary resource.  4. Make accurate observations on cut fruits, highlighting where the fruits were attached to the rest of the flower based on concept of fruit formation.  5. Sort seeds according to their dispersal methods using secondary sources.	

#### Year 4

	T -	T .	T .	T		
Domain/Unit	Changes of state	Electricity: Circuits	Sounds	Human Impact on the	Digestion and Food Chains	Classification of Plants and
				Environment		Animals
Composite Goal	compare and group materials together, according to whether they are solids, liquids or gases observe that some materials change state when they are heated or cooled, and measure or research the temperature at which this happens in degrees Celsius (°C) identify the part played by evaporation and condensation in the water cycle and associate the rate of evaporation with temperature	identify common appliances that run on electricity  construct a simple series electrical circuit, identifying and naming its basic parts, including cells, wires, bulbs, switches and buzzers  identify whether or not a lamp will light in a simple series circuit, based on whether or not the lamp is part of a complete loop with a battery  recognise that a switch opens and closes a circuit and associate this with whether or not a lamp lights in a simple series circuit recognise some common conductors and insulators, and associate metals with being good conductors	identify how sounds are made, associating some of them with something vibrating recognise that vibrations from sounds travel through a medium to the ear  find patterns between the pitch of a sound and features of the object that produced it find patterns between the volume of a sound and the strength of the vibrations that produced it  recognise that sounds get fainter as the distance from the sound. source increases	To recognise that environments can change and that this can sometimes pose dangers to living things.	To describe the simple functions of the basic parts of the digestive system in humans and identify the different types of teeth in humans and their simple functions.  To construct and interpret a variety of food chains, identifying producers, predators and prey.	recognise that living things can be grouped in a variety of ways explore and use  classification keys to help group, identify and name a variety of living things in their local and wider environment
Components	<ol> <li>Identify and classify materials as solid or liquid based on observational properties.</li> <li>Investigate the effects of temperature on melting rate of ice through a fair test.</li> <li>Investigate the melting and freezing points of materials through observation over time.</li> <li>Determine if spaces are empty from observations made through, simple tests.</li> <li>Investigate how different variables affect the rate of evaporation through fair testing.</li> <li>Gather information/ evidence from observation made to explain the phenomena of condensation.</li> <li>Illustrate how water cycle works using secondary sources.</li> </ol>	<ol> <li>Identify what a range of appliances require in order to work.</li> <li>Construct and label complete circuit and its components.</li> <li>Describe, with labelled illustrations, on how switches work.</li> <li>Predict and explain, through illustrated diagrams, why switches would not work and suggest improvements from findings.</li> <li>Determine materials that conduct electricity through classification.</li> </ol>	1. Explain how sound is made through systematic observations.  2. Determine how sound reaches our ears, and conduct comparative test to compare the volume of sound through different mediums.  3. Determine factors affecting volume of sounds through results made from comparative testing.  4. Identify a pattern in volume of sounds in relation to distance of its source through fair testing.  5. Determine factors affecting pitch of a sound through comparative testing.	1. Explain the impact of litter on the environment, and provide suggestions on addressing this issue.  2. Set up observing over time enquiry to determine if all litter decompose.  3. Use secondary sources to sequence a flow diagram to show how microplastics enter the food chain.  4. Investigate and identify the optimal material for filtering microplastics from water by conducting a comparative test.	<ol> <li>Name and sequence parts of the digestive system, and illustrate the digestive process of a food product using a diagram.</li> <li>Identify and classify each tooth into canines, incisors, and molars.</li> <li>Explain the function of teeth in the digestive system in animals, including humans.</li> <li>Describe, using model, the process of digestion.</li> <li>Research and draw complex food chains, explaining how food web shows how animals within a habitat depend on each other on food and survival.</li> <li>Identify and classify animals as carnivores, omnivores and herbivores from observations made on their teeth.</li> </ol>	<ol> <li>Demonstrate different ways in classifying living things based on observable characteristics.</li> <li>Classify vertebrates based on information gathered through research.</li> <li>Classify invertebrates based on observable characteristics and identify features that make them distinct from each other.</li> <li>Identify local invertebrates using a branching key.</li> <li>Workshop: Identify and name familiar and nonfamiliar living things using a branching key.         <ul> <li>(https://www.bugsnstuff.com/meet-the-animals/)</li> </ul> </li> </ol>

Year 5

2	
	MEAN COUNTY PRIMARY SCHOOL

Domain/Unit	Forces and mechanism	Properties and uses of materials	Earth and space	Plant and animal lifecycle	Separating mixtures and changing materials	Human growth
Composite Goal	Explain that unsupported objects fall towards the Earth because of the force of gravity acting between the Earth and the falling object  Identify the effects of air resistance, water resistance and friction, that act between moving surfaces  Recognise that some mechanisms, including levers, pulleys and gears, allow a smaller force to have a greater effect	Compare and group together everyday materials on the basis of their properties, including their hardness, solubility, transparency, conductivity (electrical and thermal), and response to magnets  Give reasons, based on evidence from comparative and fair tests, for the particular uses of everyday materials, including metals, wood and plastic	Describe the movement of the Earth, and other planets, relative to the Sun in the solar system  Describe the movement of the Moon relative to the Earth describe the Sun, Earth and Moon as approximately spherical bodies  Use the idea of the Earth's rotation to explain day and night and the apparent movement of the sun across the sky	describe the differences in the life cycles of a mammal, an amphibian, an insect and a bird  describe the life process of reproduction in some plants and animals	Know that some materials will dissolve in liquid to form a solution, and describe how to recover a substance from a solution  Use knowledge of solids, liquids and gases to decide how mixtures might be separated, including through filtering, sieving and evaporating  Demonstrate that dissolving, mixing and changes of state are reversible changes  Explain that some changes result in the formation of new materials, and that this kind of change is not usually reversible, including changes associated with burning and the action of acid on bicarbonate of soda	describe the changes as humans develop to old age
Components	<ol> <li>Investigate the effect of different surfaces on friction through comparative testing.</li> <li>Investigate the effects of independent variables on the speed of falling of objects through comparative or fair testing.</li> <li>Investigate the effects of size of canopy has on time taken for parachute to fall through comparative or fair testing.</li> <li>Investigate how the shape of an object affects its movement in water through comparative testing.</li> <li>Investigate the effects on a number of pulleys on force needed to lift a load through comparative testing.</li> <li>Investigate how length of the lever affects the force needed to lift a load through fair testing.</li> <li>Explain how gears work by using a model.</li> <li>Workshop: Feel the force! (Science museum)</li> </ol>	1. Compare and classify materials based on their properties.  2. Conduct comparative/ fair testing on the viscosity of different liquids.  3. Determine if the same material can keep things cold things cold and hot things hot through comparative testing.  4. Determine the best nappy based on its properties via comparative testing.  5. Design a product that considers properties of materials and functionality of products. *	<ol> <li>Identify main bodies found within and beyond our solar system through research.</li> <li>Describe movements of planets by using a model.</li> <li>Observe and illustrate using a diagram on movement of sun across the day and its effect on length and position of shadows.</li> <li>Explain, using a model, causes of day and night.</li> <li>Describe, using a model, the movement of the moon.</li> <li>Interpret data from scatter graph to identify possible patterns of planets, and recognising if there is no pattern.</li> </ol>	1. Describe, with labelled illustrations, the life process of sexual reproduction in flowering plants using first hand resource.  2. Identify patterns observed in the number reproductive parts of flowers using first hand sources.  3. Demonstrate plant growth without seeds by conducting propagation experiments.  4. Identify patterns, from scatter graph, the gestation period of mammals.  5. Describe the reproductive system of amphibians and changes that occur throughout their life cycle using secondary sources.  6. Describe the differences and similarities between two types of insect life cycles using secondary sources.	1. Plan, conduct and evaluate effectiveness of method in separating complex mixtures.  2. Classify a range of solids into soluble and insoluble by performing a comparative test.  3. Investigate, through comparative test, variables that may affect the rate at which two solids dissolve in water.  4. Demonstrate non-reversible change, by conducting a comparative test to best mixture for producing gas to inflate a glove.  5. Plan and conduct a fair testing to determine best combination of materials to make a 'rocket fuel'.	1. Describe changes from newborn to teenagers using secondary sources. 2. Describe changes in female and male body through puberty secondary sources. 3. Describe the human life cycle and identify changes in physical appearance, capabilities and skills from birth to death secondary sources.

Subject: Science

Year 6

Domain/Unit	Classification of living things	Evolution and Inheritance	What light does	Human Circulation & Body health	Electricity: changing circuits
Composite Goal	Describe how living things are classified into broad groups according to common observable characteristics and based on similarities and differences, including microorganisms, plants and animals  Give reasons for classifying plants and animals based on specific characteristics	Recognise that living things have changed over time and that fossils provide information about living things that inhabited the Earth millions of years ago  Recognise that living things produce offspring of the same kind, but normally offspring vary and are not identical to their parents identify how animals and plants are adapted to suit their environment in different ways and that adaptation may lead to evolution	Recognise that light appears to travel in straight lines  use the idea that light travels in straight lines to explain that objects are seen because they give out or reflect light into the eye  explain that we see things because light travels from light sources to our eyes or from light  sources to objects and then to our eyes Use the idea that light travels in straight lines to explain why shadows have the same shape as the objects that cast them	Identify and name the main parts of the human circulatory system, and describe the functions of the heart, blood vessels and blood  Describe the ways in which nutrients and water are transported within animals, including humans  Recognise the impact of diet, exercise, drugs and lifestyle on the way their bodies function	Associate the brightness of a lamp or the volume of a buzzer with the number and voltage of cells used in the circuit  Compare and give reasons for variations in how components function, including the brightness of bulbs, the loudness of buzzers and the on/off position of switches  Use recognised symbols when representing a simple circuit in a diagram
Components	Classify living things based from common observable characteristics.     Classify plants based on observable characteristics.     Classify animals based on observable characteristics.     *Observe, measure and record growth of moulds over time.     Identify individual species using a branching key.     Identify living organisms within a habitat using a branching key.     Construct a branching key to identify organisms within a habitat.	1. Identify physical and behavourial similarities and differences between organisms from two species through secondary sources.  2. Investigate variation in Homo sapiens: Analyse and interpret data from scatter graphs to determine normal distribution in height and identify patterns between height and arm span.  3. Gather and present information (from secondary sources) on how an organism adapts to live in its habitat.  4. Suggest/ refute ideas about an animal's possible characteristics and adaptation based on scientific evidence.  5. Describe, using a model, how evolution occurs.  6. Research either Charles Darwin or Alfred Wallace and explain how the scientists' observations led to them proposing a mechanism for evolution which is called natural selection.	1. Describe, with illustrated diagram of a model, how observations made support the idea that light travels in straight lines.  2. Predict and investigate which characteristics of shadows are affected by changing the independent variable.  3. Plan and conduct a fair test to determine how independent variable affects the size of shadows.  4. Present data from lesson 3 and suggest ideas, on patterns identified.  5. Describe, with illustrated diagram, how light is reflected from findings gathered in a comparative test.  6. Construct an annotated model and diagram to explain why we see objects.	1. Explain what blood is made of using secondary sources, including models. 2. Identify and label parts of the circulatory system, and use information gathered from secondary sources to describe their functions. 3. Identify parts of the heart, and describe their functions using a model. 4. Present findings, with illustrated diagrams, functions of blood vessels and valves. 5. Plot and interpret line graph to identify pattern between physical activity and heart rate. 6. Present findings on how smoking and vaping affect health.	<ol> <li>Present, using annotated diagram, a constructed a circuit, explaining how a lamp is lit.</li> <li>Identify independent variables that can be changed in a circuit through comparative test and make a prediction.</li> <li>Investigate the effects of changing independent variables of a circuit on brightness of lamp through a fair test.</li> <li>Investigate the effects of changing independent variables on other components of a circuit.</li> </ol>
